

International Platform for Dryland Research and Education Research Projects Workshop

Tottori University IPDRE is the platform of research and education for various issues occurring in drylands and developing countries. By collaborating with related institutions over the world, professors are working on their projects to solve various issues in drylands such as aeolian dust, land degradation, poverty and water scarcity. We will be hosting a workshop to introduce the latest situations of the drylands problems occurring in every part of the world, and our research activities to these issues.
